### Event Description

Join us for an immersive training simulation designed to enhance your understanding of dyslexia, dyscalculia, and dysgraphia, and to equip you with practical strategies to support individuals with these learning differences. This interactive session will provide participants with an opportunity to step into the shoes of those facing these challenges, fostering empathy and deepening insight into the experiences of individuals with specific learning disabilities. In addition to the hands-on simulations, characteristics of dyslexia, dyscalculia, and dysgraphia will be discussed and practical strategies and interventions will be shared.
